

Nimbus platform

Nimbus aims to provide open, decentralized, global, and secure platform with a range of traditional financial tools in a marketplace and dApps, with strong communities in which anyone can participate.

First, Nimbus will build next dApps: decentralized exchange, arbitrage-trading, P2P lending, crowdfunding, IPO HUB. This is unique financial tool, which give to Nimbus community wide opportunities in theirs financial activities.

NIMBUS will provide the market with 3 types of tokens available for use in DeFi:

NBU- regular token standard ERC 20, can be staked for reward. Used for all services on the platform, except voting system but including GNBUs token buying.

GNBU - governance token standard ERC 20 with limited edition circulation inside the platform only is necessary for voting system and able to acquire by NBU tokens only. Can be staked at the platform for reward.

STAN - stable coin constructed on the model wrapped assets, a vehicle for classical market products / staking / extremely-low-volatility instrument.

Technically the mechanism of stable coin issue is automatic generation of relevant number of tokens by smart contracts due to locked digital assets or fiat volumes (by deposit identification codes placement).
